Three Generations of Satisfactory Seed Service

Rendering A Nation Wide Service

In practically every gardening community throughout this Nation, Livingston's "True Blue" flower and vegetable seeds are used. Since 1850, when our Grandfather, Mr. Alexander W. Livingston, started this business, it has grown steadily. When, in 1870, he introduced the first modern Tomato (The Paragon), a nation-wide supremacy was attained which has never been surpassed. Thru these many years thousands and thousands of voluntary testimonials have come from enthusiastic users of "True Blue" seed living in practically every county of this Country. There never was a time when good seed was so much appreciated as now.

FREE TRANSPORTATION IN UNITED STATES

All seed quoted in this Catalog will be shipped by Parcel Post, Express, or Freight, our option, transportation and packing charges paid by us, to any point in the United States proper, regardless of amount or distance. The quoted price is the delivered price—no worry or bother figuring postage and other charges. Transportation charges cannot be claimed as a discount on seed purchased at our retail store.

QUICK SERVICE THAT WILL PLEASE YOU

All day and night, trains, planes and buses are leaving Columbus to all points in the United States. Practically every one carries Livingston's "True Blue" Seeds to thousands of homes throughout our Country. Being located next door to the Parcel Post and Express Stations, we are in a position to give you "Quick, Courteous Service."

FIRST-GRADE STOCKS OF HIGHEST QUALITY

The Critical Market Gardener demands the highest quality. They like "True Blue" seed. You buy this same quality for your own garden. There is only one grade of "True Blue" Seed. Buy these seeds with that extra vitality which makes your gardening success outstanding in your neighborhood.

Gardening is Our Business! Why Not Make It Your Hobby?

Where can one find so interesting a hobby as gardening, whether it be with Flowers or Vegetables? How can we otherwise keep in close touch with good old Mother Nature, who is ever unfolding new creations from little seeds for our admiration and pleasure. Here is a hobby in which you can spend as little or as great amount of your spare time as you choose. You may select the easily and more commonly grown flowers and vegetables or you may try your skill with newer and more rare introductions which have been developed thru years of study and breeding.

The trend of the times is toward the gay eighteen Eighties. The trend is back to gardening, so old that it is again new-fashioned. You can really get a new thrill in gardening this year. You will derive much pleasure, some saving and incidentally make your home surroundings the admiration of your community. Get in closer touch with nature and get a new thrill every day.

OUR NEW 1932 CATALOG

Another year we hope to be able to offer many more. Send us a snapshot of your garden. We'll be glad to know of your success and, if at all possible, to pass it on to help others.

We strive to add that human interest and personal touch that will bring us close together, though we be many miles apart. We trust that your desire in having, and our pleasure in sending, this catalog will be mutually beneficial.

Rock Gardening

A NEW GARDEN HOBBY WITH A MAGNITUDE OF POSSIBILITIES

Here is a new and inexpensive means of adding that touch of nature to your garden. Done in the correct proportions, it creates a most pleasing effect and adds greatly to the appealing atmosphere of your home.

If you have a terrace, rock-wall, or flat open space, you have a place to begin. These three types of Rock-Gardens, illustrated below, are those commonly constructed. One of them will fit in with most any situation or condition which exists in your surroundings.

Our whole country is entering an era of beauty, and Rock-Gardening certainly is the answer to "How can I add that appealing atmosphere to my home grounds?" Buy some rocks, or gather them yourself, and make a start this spring. We furnish, upon request, a very instructive leaflet "Rock-Gardening," which outlines in detail how to build the three types below.

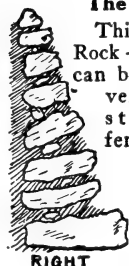

The collections offered below are fine to begin with and will create a very pleasing effect.

THE MOST POPULAR TYPES OF ROCK-GARDENS

The WALL Type

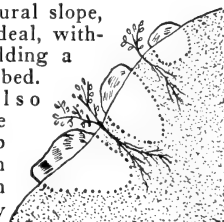

This is the type of Rock-Garden that can be built along a very steep bank, stone wall or fence. The illustration at your left shows the wrong and right way to slope the rocks.

The ALPINE Type
This type can be built in any yard, regardless of how level it may be.

The CLIFF Type

Where you have a ravine or natural slope, this type is ideal, without even building a drainage bed. You can also build this type by heaping up earth from an excavation which may form a pool.

OUR NEW ROCK-GARDEN

(as yet not named)

Out back of our farm residence and adjacent to the greenhouses, we had an unused plot of ground. It was low and rather unsightly. Last spring we conceived the idea of converting it into a rock garden. Certainly there could be no better way to transform this unsightly spot into a thing of beauty.

To do this, an old Catalpa tree, which stood where the pool is located, had to be sacrificed. After building a drainage bed, we began excavating for the pool, using this dirt as subsoil for the mound in the rear. The mound was topped with several loads of good garden dirt and the rocks, mostly "Tufa," were placed as you see them. Since we had to get fresh water to the pool, we decided to do this by use of a small brook supplied with piped water from the green house. At the upper, far end of the brook, we built a small trickling waterfall, giving the layout another naturalistic touch. With stepping stones and a small bridge we were able to leave the old path thru this plot remain almost intact. The planting was done last fall and next year we hope to show you this rock garden again as a thing of beauty.

Our New Rock-Garden—Can you suggest a name for it?

Livingston's "True Blue" Flower Seeds

Delivered Free Anywhere in United States

The following twenty-nine pages are devoted to Livingston's "True Blue" Flower Seed. You will find it a very comprehensive list. Many new varieties have been added this year to give you a larger and still better selection to choose from. You will enjoy growing flowers from "True Blue" seed. Every variety listed is of real merit and will give you satisfaction, without a doubt. Cultural directions are given through the following pages and are printed on most packages. Our leaflet "Success" with Flower Seed," (listed below) is very instructive and may be of value to you in succeeding with your Flower Garden.

ANNUALS bloom and ripen their seed the first year, then die.

Among these are Asters, Balsams, Mignonette, Sweet Peas, Nasturtiums, Morning Glories, and many other very brilliant and fragrant sorts.

BIENNIALS from seed generally bloom the second year, then die. Some varieties, if planted early, bloom the first season and therefore are treated as annuals.

PERENNIALS endure northern winters with little or no protection and live and bloom several years. Most of the perennials will bloom the first year if started early in the spring. Hollyhocks, Columbines, Larkspurs, Foxgloves, Poppies, etc., are in this class.

With the use of the symbols at your left, we are indicating under what heading each class of flowers come.

KEY TO SYMBOLS

- × Annuals. Bloom first year and die.
- + Biennials. Generally bloom second year, then die. Some, planted early, bloom same year.
- # Perennials. Endure winters. Live and bloom several seasons.
- Rock-Plants. Usually Perennials of dwarf growth.
- ÷ House Plants.
- = Climbing Plants.

THERE are few flowers that make a better show in the fall than Asters. They are, perhaps, the most popular annual flower grown, and justly so on account of their ease of culture, season of bloom, and lasting qualities, both in the garden and as cut-flowers. To be able to cut Asters abundantly and over the longest possible period, you should make several sowings of the early-midseason and late-flowering types. Sow the seed in shallow boxes in the house or in the hotbed in March; transplant the seedlings 2 inches apart in boxes, when they are large enough to handle; and plant to permanent beds in May. The second sowing can be made in the coldframe the latter part of April. The third sowing should be made the latter part of May. Set the plants of early varieties 10 inches apart in the row, and those of the later varieties 15 to 18 inches apart. The richer the ground the better your flowers will be, and water is very necessary. In the following list you will find not only the standard varieties of merit, but many of the newer sorts which are sure to please. We know that you cannot buy better seed, as our stocks are all grown for us by Aster specialists.

Royal. One of the best early-flowering sorts. It is quite similar in type of flower to the Late Branching, but will come into bloom only about a week later than Queen of the Market.

3324 **Mixed.** This mixture is well blended. Pkt. 10 cts.; 35 cts. 1/8oz.

Crego Asters. The Crego Aster blooms just ahead of the Late Branching Asters, and being of Comet type, affords variety in the garden.

The perfect flowers are borne on long stems and in great variety of colors, making them extremely useful for cutting. Height, 1 1/2 feet.

The flower is very double and averages about 3 inches in diameter. On account of the deep, velvety red color it is exceptionally fine for either bedding or border. Pkt. 10 cts.; 45 cts. 1/8oz.

Seed should be sown as soon as the weather becomes warm, in shallow drills. When well started, thin out to stand 8 inches apart.

It is delightfully perfumed, reminding one of the jasmine, and lacking the heavy oppressive odor of most Lilies. Blooms outdoors early in July, and seedling bulbs will flower the second year. The seeds can be sown in flats in the greenhouse at any time, giving the same treatment as tomato seed, and lined outside in rows about 4 inches apart as soon as weather permits. These will do well in any soil with good drainage and will give you a blooming size bulb the second year. All our strains are from the most noted seed stocks in the world, and we know they cannot fail to give the most unbounded satisfaction to amateurs and professional growers. Sow in the house, hotbed, or greenhouse; or as soon as the weather permits, the seed may be sown directly in the garden bed. Pansies thrive best in a rich soil and cool, moist situation; they do splendidly in partially shaded places. They do not do well under trees, but in some locations where the sun strikes only part of each day the most satisfactory results can be obtained. Seeds sown from July to September and the young plants transplanted into coldframes for the winter, will bloom very early the following spring.

Prices by ounce or larger quantities will be quoted upon application. Leaflet on the culture of Pansies free to customers

LIVINGSTON'S ELITE MIXTURE OF SINGLE PETUNIAS

5050—So much interest is being displayed in Petunias at the present time that we have prepared for our customers, in this splendid mixture, a combination of the large, deep-throated varieties, together with those beautiful fringed and ruffled sorts of dainty colors and markings; also the deep blood-reds (nearly black) and the exquisite rose-pinks, some with yellow borders. We are sure all will be delighted with this wonderful mixture. Pkt. (about 100 seeds) 25 cts.; \$1, 1/64oz.

Petunias are among the most popular annuals on account of their ease of cultivation and freedom of blooming, succeeding everywhere and giving a constant supply of flowers from June to October. They are also good house plants, flowering freely in a sunny window. Seed can be sown in the open ground early in the spring or in a hotbed or coldframe, to be transplanted later to beds or borders.

Balcony Petunias

The Balcony Petunias are, perhaps, the most floriferous of all and can be depended on to give an unsurpassed floral effect throughout the summer and fall. They are most effective when used among rockwork, on dry banks, or for window- or porch-boxes, but do equally well when used as a border or for bedding.

Those listed below are most beautiful. The flowers are a solid color without veinings or markings, and covered with a rich velvety sheen.

5090 **White.** Pure white. 5094 **Red.** Very brilliant.
5092 **Rose.** Bright rose, 5096 **Blue.** Rich shade.

Livingston's Choice Sweet Peas

OUR SPECIAL PRIDE

Since the introduction of the Spencer Sweet Pea, in 1904, there has been a most remarkable improvement in this flower. Renewed interest has naturally come since we have learned the secret of growing them with long stems usually carrying four or five gigantic blooms, beautifully waved and frilled. Anyone, anywhere can grow them by following a few simple rules. If possible, prepare your soil in the fall, mixing in Bone-Meal or Plant Food. (Listed on page 78.) A leaflet "How to Grow Sweet Peas" which will lead to success, will be furnished with your order upon request.

Spencer Type Sweet Peas

Spencer Sweet Peas

6200 **MARY PICKFORD** is one of the choicest Spencer varieties. It is a sturdy grower, producing an abundance of four-flowered sprays on long, stout stems. A beautiful light and dainty cream-pink, with just the faintest suffusion of salmon, making the color combination difficult to equal. The flowers are perfectly formed, with both standards and wings decidedly waved, and the keel blends nicely with the coloring of the entire flower. Pkt. 15 cts.; 40 cts. oz.

6202 **CAMPFIRE**. *New*. The brightest scarlet sunproof Sweet Pea ever offered. The flowers will stand the hottest sunshine, in fact, the brighter the sun the better the color. Are of fine size and borne in profusion on plants of great vigor. Pkt. 15 cts.; 35 cts. oz.

Extra-Early Flowering Spencers

It has been the opinion of some that this class of Spencers does well only under greenhouse culture, but this is a mistaken idea. The Extra-Early Flowering type does equally well outside, the only difference being that the blossoms are just a very little smaller. By planting the Standard Spencer and Extra-Early Flowering in our trial-grounds at the same time, we found that the latter was in full bloom fully two weeks ahead of the Standard Spencers. In selecting to this early type, we have not lost any of the Spencer characteristics. Three, and quite often four, large blooms are borne to the stem, the same as with the Standard or Late Spencer. These Extra-Early Sweet Peas are a real addition to the garden of those who want flowers early.

Livingston's "True Blue" Vegetable Seeds

Now Delivered Free Anywhere in the United States

Last year, for the first time, we introduced our new plan of free transportation on all seeds to any point in the United States, regardless of amount or distance. As stated on Page 1, the results of this plan were so gratifying that we are continuing it this year. The advantages to you in this plan are simplified ordering details, no postage worries, and, above all, a saving.

With the introduction of free transportation, we promised unusually prompt service and are glad to announce that this promise was fulfilled in most instances and appreciated, as indicated by many customers who wrote us, such as the following: L. W. Purdum & Sons, Danville, Virginia, writes: "*We get seeds from you as quickly as we do from points only 150 miles from us. It shows you people are on the job.*" Mrs. Jonathan C. Zook, Johnson County, Missouri,

writes: "*I sent you my seed order and was very well pleased with the speedy returns I got, and also generous sized packets of seed.*"

This plan in no way affects the usual high quality of our stocks. At our "True Blue" farm we grow and study the purity and adaptability of the various seeds offered, as it is our constant aim to secure and supply only varieties best suited to your needs.

Cultural directions will be found at the heading of each class of vegetables and also on most of our packets. These directions are reliable but will not apply in every detail to the extreme sections of the United States and, therefore, some allowance must be made for the difference in latitude.

All purchases of quantities between 1 oz. and 1 lb., and 1 lb. and 5 lbs. must be remitted for at the ounce or pound rate, if not otherwise quoted.

Mary Washington Asparagus

Spargel **Asparagus** Esparragos

Culture.—A most delicious and health-giving plant, but it is best when fresh cut and cooked at once. By all means have a bed of it handy to the kitchen. It comes about as early as rhubarb (pie-plant), and the two make good spring "medicine"—neither one "hard to take." Good, rich, sandy soil is best, but it is so hardy it will grow and live year after year almost anywhere. For small gardens, one-year-old plants are quickest. Seed is cheapest, but takes a year longer. Set plants about a foot or so apart each way, with the crown about 4 inches below the surface. Cover the bed with manure in the autumn and dig it in early in the spring. Fifty to a hundred plants are about right for a family garden. For more details or for larger plantings, we send leaflet free to customers, if requested.

One ounce of seed will sow 60 feet of drill. About 400 plants to the ounce

Washington Rust-Proof. Rust-resistant. Our stock of this variety was grown from originator's stock. It is a fast-growing, exceedingly tender sort of excellent flavor and of a beautiful dark green color, tinged with purple. Very hardy, producing a crop in soil where the old-type varieties were ruined with the fatal rust disease. Pkt. 10 cts.; 15 cts. oz.; ¼lb. 45 cts.; \$1.50 lb.

PALMETTO. Popular where the ground is not infected with the rust disease. While it does not produce as large stalks as the Washington strains, there are more of them. It is an early, dark green variety, having pointed tips. Pkt. 5 cts.; 10 cts. oz.; ¼lb. 25 cts.; 75 cts. lb.

Mary Washington. Rust-resistant sort. It is very early, producing large shoots even the second year from seeds. Shoots are an inch in diameter, with a tendency to be oval in cross-section. The high-branching habit makes it possible to cut shoots, with good tight tip buds, as much as 2 feet long. Pkt. 10 cts.; 20 cts. oz.; ¼lb. 65 cts.; \$2. lb.

Rosenkohl

Brussels Sprouts Col de Bruselas

Culture.—A species of the Cabbage family, which produces miniature heads from the sides of the stalk. These heads are a great delicacy if cooked in the same way as cauliflower. Sow seed about the middle of May, in a seed-bed, and afterwards set the plants in rows 2 feet or more apart, and cultivate like Cabbage.

Pride of Denmark. A fine variety, growing about 3 feet tall. Pkt. 10 cts.; 20 cts. oz.; ¼lb. 65 cts.; \$2, lb.

Long Island Improved Dwarf. Pkt. 10 cts.; 30 cts. oz.; ¼lb. \$1; \$3.50, lb.

The fine stringless green pod is about 6 inches long, straight, very fleshy, round, and crease-backed. When dry, the Bean is similar to the Red Valentine and should be used in place of it. Pkt. 10 cts.; 20 cts. ½lb.; lb. 35 cts.; \$1.05 5 lbs.; 10 lbs. \$1.90; \$4.50 25 lbs.

FRENCH HORTICULTURAL. Green shell bean. Pkt. 10 cts.; 25 cts. ½ lb.; lb. 40 cts.; \$1.20 5 lbs.; 10 lbs. \$2.20; \$5.00, 25 lbs.

Stringless Green-Pod. If a round-podded green Bean is preferred, the Stringless Green-Pod is the finest. It is a strong-growing, dark green, foliage sort, with round, meaty, brittle, slightly curved pods of highest quality, that simply refuse to get stringy even when old enough to shell. Broccoli

Brocoli

Culture.—Belongs to the same family as the cauliflower, but of a little coarser texture. More hardy and therefore better adapted to a wider range of conditions. The new Green Sprouting types are quite different in manner of growth, as shown in illustration. Sow the seed in the same manner as for late cabbage, in May, and transplant in June or July, in very rich soil about $2\frac{1}{2}$ feet apart.

EARLY LARGE WHITE. Similar to cauliflower, but is more hardy.

Heads medium size, close and compact. One of the most certain to head. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 35 cts.

Italian Green Sprouting. A new and distinct variety of the sprouting type. It forms a large head consisting of a cluster of bluish green flower-heads. These are cut, leaving about 6 inches of the stem, and are tied in bunches for market. Both stems and heads are cooked and served like cauliflower. Ready for market in about 90 days. Pkt. 25 cts.; 35 cts. $\frac{1}{2}$ oz.; oz. 65 cts.

Italian Green Sprouting Broccoli

Beets for Table Use

Culture.—The soil best suited for the culture of the Beet is that which is rather light, provided it is thoroughly mixed with manure. If wanted very early, sow in hotbeds and transplant; but for main crop sow in the spring, as soon as the ground becomes fit to work, in drills $1\frac{1}{2}$ feet apart, $\frac{1}{2}$ inch deep. For winter use, the turnip varieties may be sown as late as June and the seed covered 2 inches. When the plants are 3 to 4 inches in height, thin out so that they stand 3 to 4 inches apart. Keep free from weeds by frequent hoeing and hand-weeding if necessary. Before freezing weather sets in the roots may be stored in cellars or pits, same as potatoes. Dry earth thrown over them before the straw is put on insures their keeping over winter. Do not bruise them in handling.

One ounce of seed will sow 50 feet of drill; 5 to 6 pounds to the acre

Egyptian which has quite largely taken the place of it. The shape is more flat. Dark blood-red, medium size, tender and sweet. Good for forcing. Pkt. 5c.; 10c oz.; $\frac{1}{4}$ lb. 25c; 85c lb.

The flesh is bright red, zoned with pink; very sweet, crisp and tender when young. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 25 cts.; 75 cts. lb.

DEWING'S IMPROVED BLOOD TURNIP. The leading medium-early and late main-crop variety. Roots smooth, handsome, good size, tender, and sweet. An enormous cropper. Sow late for winter storage. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 25 cts.; 75 cts. lb.

Crimson Globe. A late main-crop variety. Root of medium size, handsome globe shape and remarkably smooth surface. Skin and flesh are deep, rich red, fine grained, sweet and tender in all stages of growth. Small tap-root; leaves are small, dark green. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 25 cts.; 75 cts. lb.

Early Wonder. A fine selection from Crosby's Egyptian, being a little smaller in size. Average more full on the bottom and come a little earlier. The demand for Early Wonder is growing several hundred pounds annually. It is a turnip-shaped variety of very uniform type and is always smooth. Flesh is a beautiful deep red color, more uniform than Crosby, and is of excellent quality. Tops are small and erect and it may therefore be planted closer than most other sorts, thereby increasing yield. Pkt. 10c; 15c oz.; $\frac{1}{4}$ lb. 35c; \$1.10 lb.

Detroit Dark Red Beet

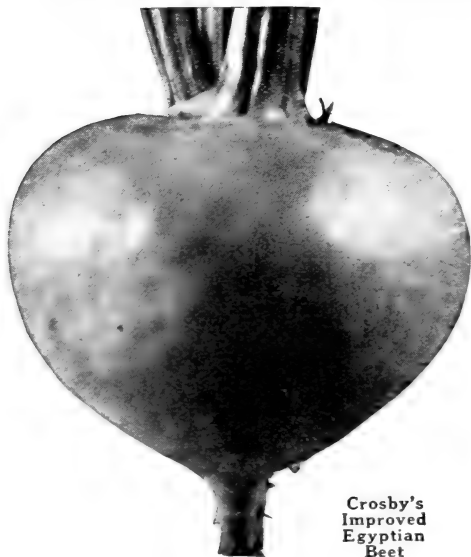

Detroit Dark Red. Greatest sort for canners.

This superb variety is one of the most popular red turnip Beets, not only for market gardeners, but for home use. It is also one of the best for canning, making a strikingly handsome product. The small top, early maturing and splendid shape and color have made it a favorite. Top small, upright growing, leaf, stem and veins dark red, blade green; root globular and very smooth; color of skin dark red; flesh deep, bright red, zoned with a darker shade, very crisp, tender and sweet, remaining so for a long time. Very uniform in shape, color and quality. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 30c; \$1.00 lb.

EDMAND'S BLOOD TURNIP. A second-early sort and very uniform. Root is always smooth, round, and handsome; top small; of good marketable size and among the best for table use. Color dark red; crisp, tender and sweet; good keeper. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 25 cts.; 75 cts. lb.

Crosby's Improved Egyptian. A very superior Beet.

Of handsome form, good size, few small tops, very small tap-root, fine quality, and a rapid grower. Very early. The shape is very desirable. (See illustration.) Takes on its turnip shape and looks well in the very early stages of its growth, on which account it is preferred for first early crop. Being a rapid grower, it may be sown outside as late as July. Skin dark red, flesh somewhat lighter, with a few specimens of light red or pink. All, however, are of a fine bright red shade when boiled and equally delicious in flavor. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 30 cts.; \$1 lb.

Weißkraut

Cabbage

Gol repollo

Culture.—Cabbage requires deep, rich, mellow soil, high manuring, and good culture to obtain fine, solid heads. For early use, sow seeds of the early kinds in the hotbeds or in a box in the house the last of January or early in February; transplant into the open ground in April in rows 2 feet apart and $1\frac{1}{2}$ feet apart in the row; or sow a bed of seed outside as soon as the soil can be worked; transplant in about four weeks. For second early Cabbage, sow in April and transplant in May. For late Cabbage, sow in May and transplant in July in rows 3 feet apart and 2 feet

One ounce of seed produces about 2,500 plants, 4 ounces enough plants to set an acre

apart in the row. In transplanting, it is important that plant be set down to the first leaf, so that the stem may not be injured in case of frost. Be careful not to cover the heart of the plant. Hoe every week and stir soil deeply. As they advance in growth draw a little earth to the plants until they begin to head. To prevent splitting or bursting, go frequently over the ground and push every cabbage that appears about to mature over sideways, which will break some of the roots and check its growth. To prevent attacks of the cabbage fly on small plants, dust thoroughly with plaster, air-slaked lime, or wood ashes.

Early Varieties

Early Jersey Wakefield. Many market gardeners consider this the **best early variety.** Grown extensively for market and shipping. Its merits are large heads for an early sort, small outside foliage and uniformity of crop. Pyramidal in shape, having a blunted or rounded peak; very sweet. **The seed we offer is from the very best growers** and has given satisfaction for many years. Pkt. 10 cts.; 15 cts. $\frac{1}{2}$ oz.; oz. 25 cts.; 80 cts. $\frac{1}{4}$ lb.; lb. \$2.75.

Immense quantities are grown in the South for shipping. Pkt. 10 cts.; 15 cts. $\frac{1}{2}$ oz.; oz. 25 cts.; 80 cts. $\frac{1}{4}$ lb.; lb. \$2.75.

Golden Acre. In this variety you get a very fine sort from Denmark—the home of fine Cabbages. Golden Acre produces heads about a week ahead of Copenhagen Market. It is very uniform, medium size and quite round. The head is surrounded by small outer leaves as shown in the illustration. It is very firm, being equal to any of the late sorts in this respect. On account of its hardness it will stand for a long time without bursting. Pkt. 15 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 45 cts.; \$1.40 $\frac{1}{4}$ lb.; lb. \$5.

Special Strain Golden Acre. First time listed, but furnished to a number of gardeners last year. They report "Best ever seen." This Special Strain comes from our Denmark Grower. Copenhagen Market Cabbage

True Blue Seeds are seeds of the highest quality

Copenhagen Market. A splendid extra-early round-headed sort which matures as early as the Wakefields and is of larger size. Late Varieties of Cabbage

Danish Ballhead Short-Stem Cabbage

Danish Ballhead Short-Stem. (Hollander, Dutch Winter). This splendid variety is well known for its remarkable solidity and grand keeping qualities. The heads are very heavy and superb in quality, and the extra weight, in limited space, will be appreciated by those who grow for distant markets, ship in carloads and sell by weight. Our stock is grown for us by one of the best Danish growers. The most popular of all the late Ballhead types. Pkt. 10c; 20c $\frac{1}{2}$ oz.; oz. 30c; 90c $\frac{1}{4}$ lb.; lb. \$3.25.

It is a species of Cabbage with a fine delicate flavor, as tender as head lettuce, and in great demand for numerous dishes, such as salads and cole slaw, or it may be cooked quickly. For wintering in coldframes for early crop, it cannot be excelled, and it does equally well for a fall crop if planted late and treated the same as late cabbage. Livingston's Earliest Cauliflower has taken the place of many of the late varieties on account of its fine texture, pure white heads, and large uniform size. A texture, pure white heads, and large uniform size. Price, under our "True Blue" Seal, pkt. 25 cts.; 65 cts. $\frac{1}{4}$ oz.; $\frac{1}{2}$ oz. \$1.25; \$2.30 oz.; $\frac{1}{4}$ lb. \$8.75.

When plants are 2 inches high, or have formed two rough leaves, transplant them into beds and set 3 to 4 inches apart. Keep beds closed and very warm, shading from direct rays of the sun and giving an occasional watering until the weather is warm and all danger from frost and cold nights is past; then harden the plants by gradual exposure to the sun and air, and transplant to the open ground late in May or June, into warm, rich soil, 2 to 3 feet apart each way. When about a foot high, draw the earth up to the stem.

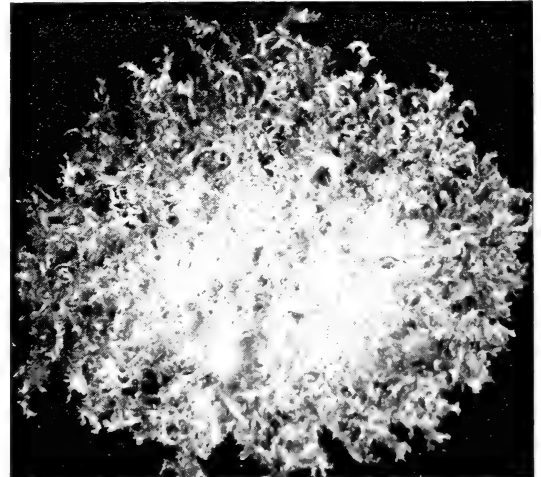

One ounce of seed produces about 1,500 plants

Herbs

Sweet, Pot, Culinary, and Medicinal

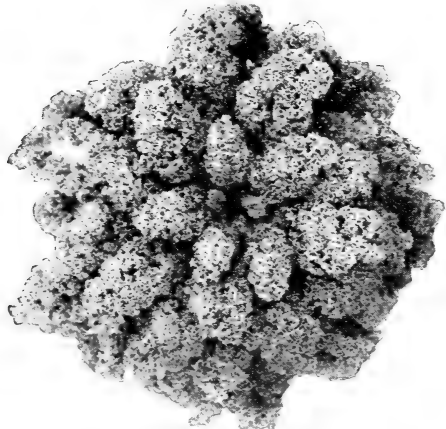

Culture.—Herbs delight in a rich, mellow soil. Sow in early spring in shallow drills 1 foot apart; cover lightly with fine soil, and when up a few inches thin out, or transplant into prepared beds. Livingston's Lettuce

Culture.—For early spring use, sow in a seedbed in September or October, and protect through the winter in coldframes, or in the South with leaves or litter, or sow in a hotbed in early spring. Lettuce plants may also be started very successfully in the house in boxes which are about 5 inches deep. Make soil very fine and firm. Mark off into rows 2 inches apart and $\frac{1}{4}$ inch deep, into which sow the seed quite thinly; cover with blotting or brown paper fitted into the top of the box. First saturate the paper with water and keep moist until the seed germinates, then remove. Expose the young plants gradually to the light. As soon as the ground outside is dry and warm, so that it can be well worked, set out the plants 8 inches apart in the rows. For outside sow very thinly in rows $1\frac{1}{2}$ feet apart, covering seed $\frac{1}{4}$ inch deep with fine soil, and when well up thin to 1 foot apart in row.

One ounce of seed sows 100 square feet; plants 120 feet of row; produces 3,000 plants.

Leaf or Loose Headed Varieties

Arlington Fancy Curled. A beautiful variety

of the curly-leaf type. It resembles the best stocks of the Grand Rapids, but it is more beautifully curled. It is very true to type, of excellent quality, and for garnishing nothing in the Lettuce line excels it. Everyone should grow some of it, as it is one of those really good things that became popular favorites with the general public. It has a slight tendency to head, which makes it very crisp. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Black-Seeded Simpson. Very popular among market gardeners, and fine for the home table. Forms a large, loose head of nearly white, curly leaves that are large, thin, very tender, and of good quality. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.40 lb.

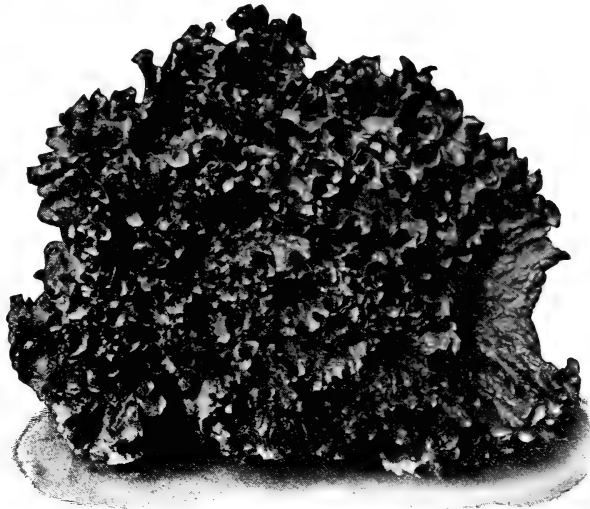

EARLY CURLLED SIMPSON. Forms a compact mass of curly leaves of light yellowish green, very tender. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 35 cts.; \$1.25 lb.

Heading Varieties

ICEBERG. Beautiful large, curly leaves of light green, with a slight red tinge at the edges. Heads solid, crisp, tender, and of fine flavor. Do not confuse with Wonderful; they are entirely different. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 50 cts.; \$1.75 lb.

White Boston Lettuce

Selected Grand Rapids Lettuce

Selected Grand Rapids. Especially adapted

for greenhouse culture; also good to sow outside early in the spring. Our stock of this variety is extra fine as we pay more for it, and have it selected. It does not form a head, but makes large, compact bunches of light, attractively curled and fringed leaves. It grows very rapidly and keeps in good market condition for a long time after cutting. Should be sown more shallow than the other sorts, otherwise it may not germinate. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

OHIO GRAND RAPIDS. It is a dark-leaved Grand Rapids, and a quick grower. Especially adapted to midwinter crops in greenhouse. Very hardy. Not advised for home-gardens. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

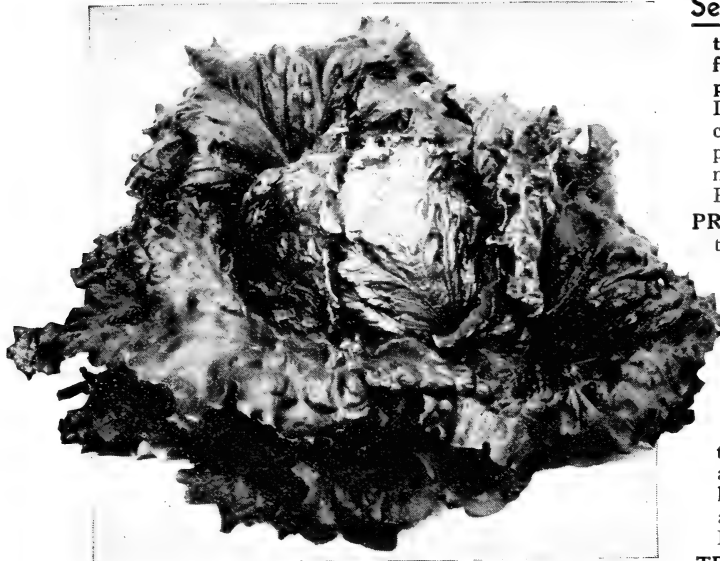

Livingston's Crisp-as-Ice. Introduced by us in

1895. A most beautiful, attractive Lettuce of the cabbage type. The heads are solid, of immense size, and so exceedingly crisp, tender and brittle as to fully warrant the name, "Crisp-as-Ice." The glossy leaves are thick, nicely crimped and curled; the outside leaves are beautifully variegated with dark brown, bronze and green. The heads when cut open, have a rich, creamy yellow heart. A superior family and home-market Lettuce, and so hardy as to withstand frost very late in the season. Pkt. 10 cts.; 15 cts. $\frac{1}{2}$ oz.; oz. 20 cts.; 65 cts. $\frac{1}{4}$ lb.; lb. \$2.

MAY KING. An early variety of head lettuce. Grows quickly, producing fine, medium-sized heads, even in poor soil. It is not easily affected by cold or wet weather. Pkt. 5 cts.; 10 cts. $\frac{1}{2}$ oz.; oz. 15 cts.; 45 cts. $\frac{1}{4}$ lb.; lb. \$1.50.

White Boston. Forms a fine, large, solid head similar to Big Boston, but does not have brown edges on the outer leaves. Blanches to creamy yellow. Comes earlier than Big Boston. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Heading Varieties Lettuce --Continued

Wonderful Lettuce

Wonderful (New York). A truly wonderful heading variety. It is peculiar in having a dark green leaf when growing, but the head blanches to a light green with a center of creamy white. Heart is solid, sweet, tender, and crisp. This variety frequently weighs 2 to 3 pounds and has been known to grow to 6 pounds. Should be planted to avoid hot seasons for heading. Perfect heads may be cut from the same bed for many weeks. Pkt. 10c; 15 cts. $\frac{1}{2}$ oz.; oz. 20c; 65c $\frac{1}{4}$ lb.; lb. \$2.

All-Heart. It is a very reliable, hard-heading variety of Cabbage-Lettuce and will give satisfaction wherever grown. It rarely fails to make a large, solid head. Withstands heat; leaves are closely set, having a solid heart, even before it is fully grown. Color yellowish green; flavor rich and buttery. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Senf **Mustard** Mostaza

Sow seed in any good garden soil early in the spring, in rows $1\frac{1}{2}$ to 2 feet apart, and when well up thin out the plants so as to stand 8 to 10 inches apart. Several sowings a week or so apart gives tender leaves throughout the season.

One ounce of seed will sow 50 feet of row

Fordhook Fancy. The vigorous-growing plants have beautiful, dark green, curled leaves. It is most productive from early spring sowings, and stands well, even during the hot summer months. Most popular of all. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 30 cts.; \$1 lb.

Selected Big Boston. (White - seeded.)

This selected Lettuce is a very desirable large variety for forcing in coldframes and for outdoor planting. Plants large, hardy, vigorous. Leaves broad, smooth, thin, of a light green color. IMPROVED HANSON. None more reliable for outdoor cultivation. Heads grow to large size, and are very slow to run to seed. Outer leaves are bright green and beautifully frilled on the edges; inner leaves white and deliciously sweet, tender, and crisp. It stands summer heat the best. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 35 cts.; \$1.25 lb.

TRIANON COS (Romaine). The long, narrow leaves, which form solid heads, blanch and become snowy white. Excels in quality and crispness. Can be eaten in the same manner as celery. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Fordhook Fancy Mustard

Zucker-Melonen **Muskmelons or Cantaloupes** Melon Almizcleno o Cantain

Culture.—A rich, sandy soil and good seed are absolutely necessary for success in raising the best Muskmelons. The seed should not be planted until the ground has become dry and warm; plant in hills 6 feet apart each way; old, well-rotted manure should be thoroughly mixed with the soil in each hill and in liberal quantity. Put six to ten seeds in the hill and when danger from insects is past, leave three or four

of the strongest plants only. Muskmelons or Cantaloupes may also be sown in rows that are made about 6 feet apart, and when the plants are well up thinned to stand in hills 5 to 6 feet apart, just before the plants begin to run. This method requires more seed but insures a good stand of plants in spite of the bugs. Cultivate often and not deep.

One oz. will plant 60 hills; 2 to 3 lbs. will plant an acre

Green Fleshed Varieties

Livingston's Ohio Sugar Muskmelon

Livingston's Ohio Sugar. Absolutely distinct and very superior melon, the result of years of most careful and painstaking selection and breeding. One of the sweetest and most luscious green-fleshed Cantaloupes now on the market. It is the rarest exception that an under-quality melon is found. Of that desirable size in demand in all markets, round, inclined to oval in shape, heavy in proportion to size because the flesh is deep. Distinctly ribbed and well netted—color of skin gray-green. The firm flesh is an attractive green of exquisite texture, sugary, juicy, tender, and free from stringiness; seed cavity is small. Uniform shape. A market and home-garden melon. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Delicious Gold-Lined Rocky Ford.

The shape is slightly oval, heavily netted. Flesh thick, fine-grained, and sweet; color green with a gold margin next to the seed cavity. Attractive both as to outward appearance and when cut. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Fruit oblong; skin deep green, turning to golden at maturity, well covered with a close gray netting and distinctly ribbed; flesh fairly thick and very sweet; color medium green blending to light pink near the center. Honey Ball. As round as a ball. Thick skin, cream colored and smooth, sweet green flesh and small seed cavity. It is a prolific and long keeping variety. Early maturity makes it popular where the season is short. Pkt. 10 cts.; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Honey Dew. Green fleshed. Sweet as honey. Averages about 6 inches in diameter and weighs five to six pounds. The skin is smooth with little netting, flesh green, very thick and fine-grained. Pkt. 10c; 15 cts. oz.; $\frac{1}{4}$ lb. 45 cts.; \$1.50 lb.

Livingston's Tip-Top. Tip-Top in quality, appearance, and productiveness. Introduced by us in 1892. This splendid melon has "held its own" for many years against all introductions in the melon line, and no yellow-fleshed melon of which we have any knowledge compares with it in good qualities. The testimony of all who have used Tip-Top is that every melon produced, whether big or little, early or late, is a good one—

sweet, juicy, finest flavor, firm fleshed and eatable to the outside coating. Its appearance on the market is very attractive—sells on sight. Customers soon learn to pick them out and will have no other variety. Fruit of large size, and flesh bright salmon in color; slightly oblong, evenly ribbed, moderately netted, very productive. Choice Onion Seeds

Cebollas

Culture.—Onion seed should be sown as early in the spring as possible to get the ground in shape, even though the weather is cold. Thorough preparation of the soil is one of the most essential points in successful Onion-growing. They delight in a rich, deep, sandy loam, but excellent yields can be obtained from

heavier soils properly fertilized. Sow the seed in rows 12 to 14 inches apart and about $\frac{1}{2}$ inch deep. After they are well started, or about 3 to 4 inches high, thin out to stand about 2 inches apart, keeping them well hoed and free from weeds at all times throughout the season.

Culture.—Peas thrive better if the ground has been manured for a previous crop, but if the ground is poor and requires enriching, use well-rotted manure, and for the dwarf varieties you can hardly make the soil too rich. When grown as a market crop, Peas are seldom staked or bushed, but are sown in single rows 3 to 4 inches deep, the depth depending on the time of sowing, nature of the soil, as well as the variety. Wrinkled varieties are not so hardy as the smooth sorts, and if planted early should have dry, warm soil, and covered only about 1 inch, or they are liable to rot in the ground. These wrinkled varieties are, however, the sweetest and best flavored. Rows for planting should be from $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart, according to the kind, soil, and manner of culture desired. When grown in the kitchen-garden it is best to sow the seed in double rows, 6 to 8 inches apart, the tall sorts doing better on trellis or brush.

Two pounds sow 100 feet of row; 75 lbs. sow an acre

Pepper

Livingston's Peppers

Pimento

Culture.—Peppers should be started in a hotbed or coldframe and transplanted about the end of May into a sunny corner of the garden, in rows about 2 feet apart, with the plants about the same distance between them in the rows. They can also be sown in open ground in a prepared seed-bed when all danger from frost has passed and the weather has become settled and the soil warm. When the little plants are about 3 inches in height, transplant as above into the rows where they are to remain. Some very rich fertilizer, stirred into the soil when the plants are about 6 inches high, will be found very beneficial in the crop.

One ounce of seed will produce about 1,500 plants

Parstinafe Parsnips Chiriva

Culture.—Parsnips are quite hardy, hence you can sow the seed as early in the spring as the soil and weather will permit. Plant in drills 15 inches apart and ½inch deep, in rich, well-manured ground, well dug. Keep crust from forming over the seeds or they won't be able to get through. Cultivate often and keep free from weeds, especially while small, and thin to 4 inches apart in the rows. If you prefer them short and thick, don't break up the ground more than about 6 inches deep. The roots improve by being left in the ground until spring. Secure enough in pits or the cellar for winter use.

One ounce of seed to 200 feet of drill; 5 to 6 pounds for an acre

Hollow Crown. (Large Sugar). An excellent variety for the table. Probably grown more universally than any other. The roots are white, smooth, sugary, and of excellent flavor, easily harvested, 12 to 15 inches in length, and often 3 inches in diameter at the top, with a hollow crown about the stem. Pkt. 5 cts.; 10 cts. oz.; ¼lb. 25 cts.; 90 cts. lb.

Rhabarber Rhubarb or Pie-Plant Ruibarbo

Culture.—Requires a deeply cultivated and thoroughly manured soil. Sow the seed early in the spring, in rows 1 foot apart. The second year after planting, plants can be removed in autumn to the permanent place in the garden allotted to them. Plant the roots 2 feet apart each way.

One ounce of seed will produce 500 plants

Improved Thick Long Red Pepper

Pteridiflie

Parsley

Perejil

Culture—As the seeds germinate very slowly, three to four weeks sometimes elapse before the plants make their appearance. Seed should be sown early in the spring. Parsley is used for seasoning soups and stews, for salads, and is also very universally used for garnishing. It makes an ornamental border in the flower-garden. Succeeds best in a rich, mellow soil. Take up a few plants in the fall and put into 6 or 7-inch pots. Keep well watered and they will produce an abundance of leaves all winter, besides making very ornamental plants.

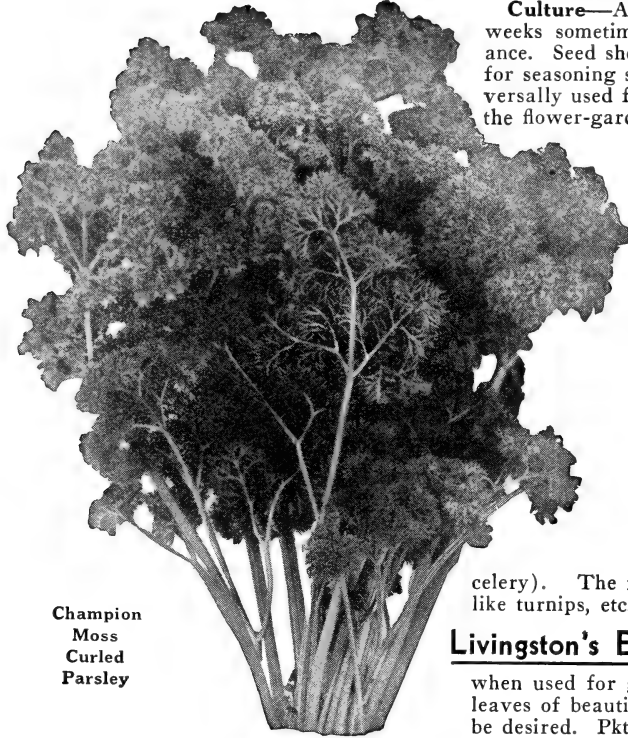

One ounce of seed will sow about 150 ft. of drill

Pumpkin

Calabazas

Culture—Pumpkins are not so particular in regard to soil as melons or cucumbers, but in other respects are cultivated in a similar manner. Sow in the month of May, when you plant your corn. Make hills the same as you do for squashes, but about 8 to 10 feet apart each way. It is preferable to grow Pumpkins in the field, and not in the garden, as they mix with the squashes and other vines. You can sow some among the late corn, putting in a few seeds, say every third or fourth hill. This will give you plenty for the table, and your stock the coming winter.

One ounce of seed will plant 15 hills; 3 to 4 pounds will plant an acre

Common Yellow Field (Yankee Cow; Conn. Field). The common variety cultivated by farmers for stock-feeding, and is used to some extent for canning. Very productive. Same color as Small Sugar but not so sweet. Pkt. 5 cts.; 10 cts. oz.; $\frac{1}{4}$ lb. 20 cts.; 60 cts. lb.

The upper half of the bulb is a pleasing scarlet while the lower portion is pure white. To winter over for spring use, sow the seed in August or September, in drills 12 to 14 inches apart. At approach of cold weather, cover lightly with straw or any handy litter. Tomato Culture

For very early fruit, the seed should be sown in a hotbed about the first week in March, in drills 5 inches apart and $\frac{1}{2}$ inch deep. Later sowings may be made until the last of April. (Sufficient plants for a small garden can be started by sowing a few seeds in a shallow box or flower-pot and placing in a sunny window in the house.) When the young plants are 3 to 4 inches high, they should be set 4 to 5 inches apart in another hotbed or coldframe, or transplanted into small pots, allowing a single plant to a pot. Expose to the air as much as possible to harden them for planting out. Water freely at the time of transplanting into the open ground and shelter from the sun a few days until the plants are thoroughly established. Cultivate as long as the vines will permit, but the last two or three workings of the soil should be very shallow.

Tomatoes grow splendidly trained to stakes or trellises. The fruit is much improved, not only in appearance, but in quality, and is a week or more earlier. This mode of cultivation is quite common among gardeners who grow for the early market, and at private places throughout the country; especially is this desirable where neatness and at the same time economy of space in the home-garden is desired. The usual method is to set one strong plant to a stake 5 to 7 feet high, tying the plant up with wool or other strong, soft twine, and pruning quite freely as the vine advances in growth. By this method plants may be set much closer than in the ordinary way. Ask for Tomato Booklet giving more detailed instructions. **About 2,000 plants will be produced from one ounce of seed.**

A Pioneer

Mr. Alexander W. Livingston, founder of what is now The Livingston Seed Company, will always be remembered for his service to mankind in successfully pioneering the modern Tomato.

In 1847, after several unsuccessful efforts had been made, as far back as 1812, to induce people to eat the "Love Apple," Mr. Livingston became interested. Through his determination to develop something worth while, and after some twenty years of hard study, he succeeded in developing a Tomato which had shape, size, and, above all, quality. And, in the year 1870, the first Tomato of real merit, his Paragon, was introduced to the public.

The Livingston Seed Company, now in its 82nd year in the same family, have jealously guarded this supremacy and are today, perhaps, the foremost authorities on Tomatoes. Most of the varieties being offered are grown by us. Many are of our own origination and introduction.

The descriptions given on the following pages are as nearly correct as we can give them, as shown by our trial-ground records.

Red Varieties

Livingston's Ohio Red Tomato

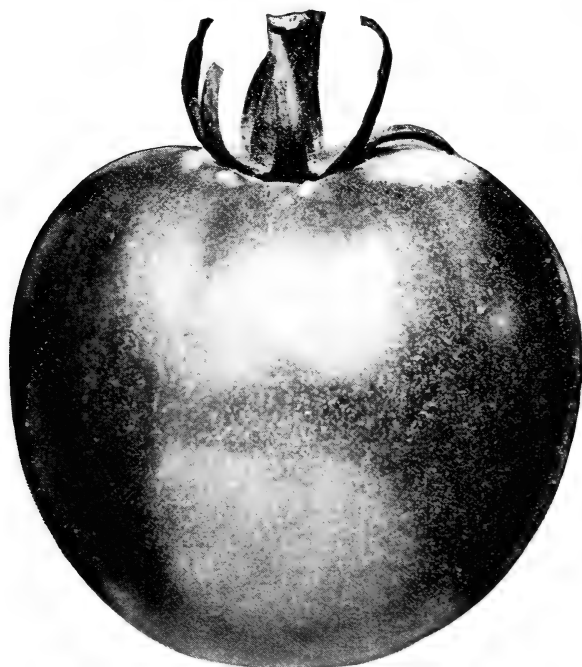

Introduced by us in 1929

An entirely new type of Tomato

This new variety is the reverse in shape of the old flat type which was shallow from stem-to blossom-end, and because of this new departure in shape, is already becoming popular. There is but little indentation at the stem-end, in fact, none at all in many of the fruits. They frequently have a slight point at the blossom-end, are of good average size, of brilliant red color, and one of the most attractive sorts we have ever seen. Not a freak, but has real, practical value, appealing at once both to private and market gardeners. Pkt. 20 cts.; 50 cts. $\frac{1}{2}$ oz.; oz. 90 cts.

Burbank. A very early red sort originated by Luther Burbank. Ripens a larger percentage of fruit about a week sooner than other early sorts. The plant grows to medium size and is quite productive. Pkt. 10 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 40 cts.; \$1.30 $\frac{1}{4}$ lb.; lb. \$4.50.

Break-O-Day. The new Pritchard hybrid developed from Marglobe and Marvana, having their disease resistant qualities. Resembles Marglobe in shape and size, but not so productive. Has vines of open habit like Marvana. Matures early, being next to Earliana in this respect. Fruits are solid, meaty and have a beautiful scarlet color. Will become quite popular with home-gardeners. Pkt. 20 cts.; 35 cts. $\frac{1}{2}$ oz.; oz. 65 cts.; \$2.25 $\frac{1}{4}$ lb.; lb. \$8.00.

Hansing's Improved Wilt-Resistant Marvel

Introduced by us in 1927

A NEW WILT-RESISTING SORT ESPECIALLY SUITABLE FOR GROWING UNDER GLASS

An early, bright red sort of medium size, originated with Mr. Hansing, a prominent Indiana gardener. In shape it is about the same as Bonny Best, slightly more flat, and in quality first class. The fruits are produced in good-sized clusters, about 6 inches apart, on a vigorous-growing vine, with only an average amount of foliage.

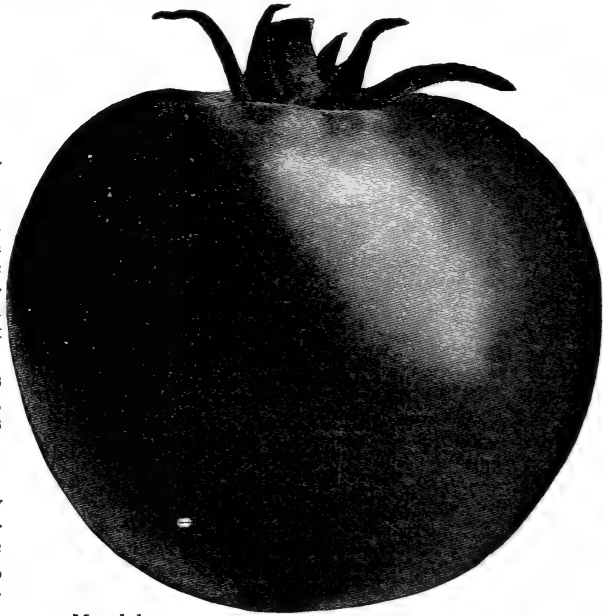

It is coming into favor with the critical under-glass growers for early market. Where wilt is prevalent, this Tomato is highly recommended when a red sort is preferred. Pkt. 15 cts.; 35 cts. $\frac{1}{2}$ oz.; oz. 65 cts.; \$2.15 $\frac{1}{4}$ lb.; lb. \$7.50.

Greater Baltimore. A midseason red variety, very heavy, due to its extreme firmness and very thick meat. Fruit ripens evenly; free from ridges and cracks. A great canning sort, earlier than Stone. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1, $\frac{1}{4}$ lb.; lb. \$3.50.

Livingston's Paragon. *Introduced by us in 1870.* The first perfectly smooth, deep red Tomato offered by us to the American people. We have kept it up to the original high standard. A heavy yielder, ripening medium early. The fruits are of large size. Flesh is solid, of superior quality and bright rich red. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1, $\frac{1}{4}$ lb.; lb. \$3.50.

Earliana. The plants are compact in growth, with short, close-jointed branches, setting fruits very early. With our strain of Earliana the fruits are bright red, of uniform medium size, fleshy, solid and smooth. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1, $\frac{1}{4}$ lb.; lb. \$3.50

Bonny Best. Best red for greenhouses. Is of medium size, bright scarlet, always smooth, and of uniform size and shape. A splendid sort to follow Earliana in the open field. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1, $\frac{1}{4}$ lb.; lb. \$3.50.

Marglobe

Marglobe

THE WILT AND NAILHEAD RUST-RESISTANT TOMATO

Marglobe has been thoroughly tested in sections where the above diseases are very destructive and has made a wonderful record. It was produced by crossing the Livingston Globe with one or more other varieties, and after seven years of careful selection was offered in 1926. A vigorous grower whether in greenhouse or field; bright red in color, quite early, of large size, almost round, and very productive. It is being used in greenhouses and sections of the country where "wilt" prevails. We are receiving large orders for it from many Tomato-growing sections. We grew the seed we are offering from selected planting stock supplied by the originator. Pkt. 10 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 40 cts.; \$1.30 $\frac{1}{4}$ lb.; lb. \$4.50.

Livingston's Stone

Introduced by us in 1889

The Greatest of All Canning Tomatoes

Livingston's Stone is always of good size, deep through from stem to blossom-end and very firm. Skin is bright scarlet, perfectly smooth, and strong enough to stand shipping and long-distance hauling to perfection. Flesh is very solid and of finest flavor. Seed-cells are small and few. Livingston's Stone is recognized as one of the greatest canning Tomatoes. Order direct from us and get the real thing. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1 $\frac{1}{4}$ lb.; lb. \$3.50.

Norton. Wilt-resistant Stone. Popular on account of its remarkable wilt-resisting qualities. Similar in growth, color, and season to our Livingston's Stone. A valuable sort for the South, or where the wilt is prevalent. Try Norton along with Marglobe. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 35 cts.; \$1.15 $\frac{1}{4}$ lb.; lb. \$4.

A grand, good slicing variety, the seed-cells being surrounded by bright red, heavy, meaty and delicious flesh. Livingston's Dwarf Stone. *Introduced by us in 1902.* The fruits are nearly as large as those of our Standard Stone. Fruit bright red, smooth, ripens evenly, medium early. The plants may be set as close as $\frac{1}{2}$ to 2 feet apart, if necessary, and still produce an abundant crop. Pkt. 10 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 40 cts.; \$1.30 $\frac{1}{4}$ lb.; lb. \$4.50.

Livingston's Ideal (A Red Globe)

Introduced by us in 1930

This new variety may properly be termed "A Red Globe." We have been working to produce a Tomato that would serve well both for under-glass and outside culture, and in Ideal we believe we have attained our purpose. It has a strong, healthy plant and shows no signs of blight. The globe-shaped fruit is of medium size, bright scarlet with firm flesh and about same season as Bonny Best. Fruit clusters set closely on stalk, thus increasing the yield under glass. Pkt. 20 cts.; 40 cts. $\frac{1}{2}$ oz.; oz. 75 cts.; \$2.75 $\frac{1}{4}$ lb.; lb. \$10.

Chalk's Early Jewel. Of large size, a few days later than Bonny Best. Flesh thick, bright scarlet, solid, excellent flavor, ripens evenly. One of the largest cropping varieties. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1 $\frac{1}{4}$ lb.; lb. \$3.50.

Livingston's Pink Tomatoes

Livingston's Globe Tomato

Introduced by us in 1905

THE GREATEST SHIPPING TOMATO KNOWN

We feel quite safe in saying that no Tomato ever introduced has been so valuable to the southern growers and shippers as the Livingston's Globe. No variety has produced more valuable crops, almost every season, since we introduced it in 1905. Literally, train-loads of crated Livingston's Globe Tomatoes are shipped out of Florida, Texas, Mississippi, and other Southern States each season. The shape, the size, and its beautiful color help to make it popular in all markets.

As a greenhouse sort, it is not excelled by any other pink variety, and it is one of the best for the home-garden, comes into bearing early, and keeps on bearing almost until frost. The fruits are of large size, always smooth, with firm flesh that ripens evenly; color, a fine glossy rose, tinged with purple. Quality good, being mild, pleasant, and of delicious flavor. Fine for early growing on stakes or trellises. Almost blight-proof. Genuine Livingston-grown seed, always put up under our U. S. registered trade-mark seal. Pkt. 10 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 40 cts.; \$1.30 $\frac{1}{4}$ lb.; lb. \$4.50.

Livingston's Magnus

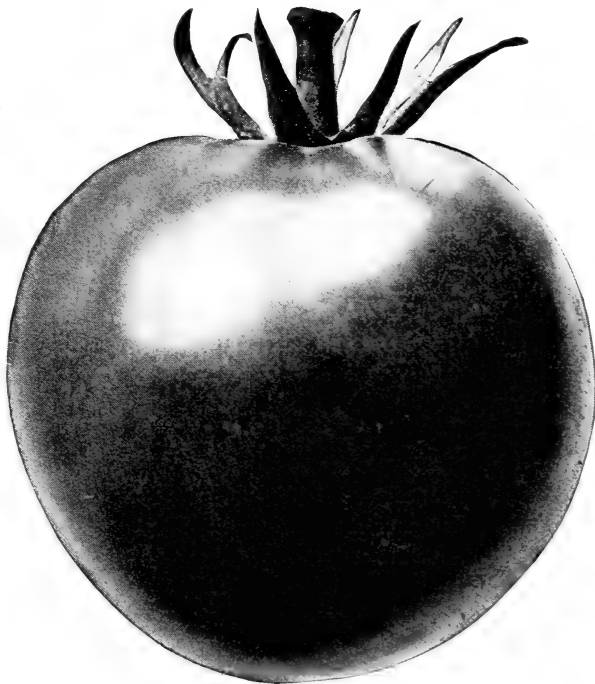

Introduced by us in 1900

This distinct variety is large, early, thick, heavy, and solid, and one of the most handsome Tomatoes in cultivation. It is unsurpassed in quality and in the production of fine, large, purple-skinned fruits. The form is quite deep through from stem- to blossom-end. Heavy cropper. Has broad potato-leaf foliage which prevents sunburn. For staking up in the open field, it is a fine sort. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1 $\frac{1}{4}$ lb.; lb. \$3.50.

Livingston's Beauty

Introduced by us in 1886

Although introduced so many years ago, this is still one of the popular purple-colored Tomatoes. The plants make a strong growth, are hardy and bear profusely. The large, perfectly shaped early and firm fruits are produced in clusters of four to six, and retain their size until late in the season. Pkt. 10 cts.; 20 cts. $\frac{1}{2}$ oz.; oz. 30 cts.; \$1 $\frac{1}{4}$ lb.; lb. \$3.50.

Livingston's Globe Tomato

June Pink. A Pink Earliana. Ripens as early as Earliana. The fruit is of medium size, uniform, smooth, and attractively shaped. Excellent for shipping. In color it is a bright, pleasing pink. Pkt. 10 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 40 cts.; \$1.30 $\frac{1}{4}$ lb.; lb. \$4.50.

Livingston's Big Tomatoes

Beat Your Neighbor with Livingston's Giant Oxheart

The big tomato everybody is talking about
Introduced by us in 1926

Oxheart is truly the giant of all tomatoes. Its attractive shape, large size and excellent table qualities has quickly brought it into deserved popularity among back yard gardeners. Market-growers are finding it in great demand. There is now great rivalry in gardening neighborhoods to see who can grow the finest Oxheart in shape and size. Three pound specimens are quite common. One customer sent us a five pound specimen.

The Oxheart is smooth, thick, tender and almost seedless; frequently showing 2 inches thick without a seed cavity. The color is pink and it has that delicious mild flavor that every lover of this fruit likes so well.

We regret that so many customers were disappointed last year. We increased our acreage this year and while the crop was short we feel that we shall be able to supply the demand.

Selected seed, grown by us. Pkt. 20 cts.; 40 cts. $\frac{1}{2}$ oz.; oz. 75 cts.

Colossal. This strain of Ponderosa exceeds it in average size and smoothness. A slice of this enormous-fruited sort looks like a piece of beefsteak. The fruit has purple or pink skin and many are quite smooth. Pkt. 15 cts.; 30 cts. $\frac{1}{2}$ oz.; oz. 50 cts.; \$1.75 $\frac{1}{4}$ lb.

Crimson Cushion (Beefsteak). An extremely large, bright red variety of the Ponderosa type, that ripens evenly and is of good quality. A good companion to the Colossal. Pkt. 15 cts.; 25 cts. $\frac{1}{2}$ oz.; oz. 45 cts.; \$1.50 $\frac{1}{4}$ lb.

Livingston's Oxheart Tomato

Ponderosa Tomato

Livingston's Buckeye State

Introduced by us in 1893

In this variety we have been successful in eliminating the roughness so common to large-fruited sorts. Pkt. 10 cts.; 20 cts. 1/2oz.; oz. 35 cts.; \$1.15 1/4lb.; lb. \$4.

Livingston's Yellow Tomatoes

Livingston's New Yellow Oxheart.

Introduced by us in 1929

A new variety of our Oxheart-type Tomato. All our customers who are familiar with Livingston's Oxheart, and who did not try this new yellow one last season, should give it a trial this year. It is of the same shape as the original, but the skin and flesh are a rich shade of yellow. A platter of slices of the Yellow Oxheart, mixed with slices of the original Pink Oxheart, makes an appetizing dish. Try it. Pkt. 20 cts.; 35 cts. 1/4oz.; 1/2oz. 50 cts.; 90 cts. oz.

Rüben

Turnip

Nabos

Culture.—Early varieties of Turnips should be planted just as soon as the ground is dry in spring. Sow early in rows, and later broadcast. The Rutabaga varieties, and also the late sorts, will do better if planted in rows at least 1½ feet apart, and thin out the plants when well up to 6 inches apart. Cultivate often and thoroughly. The Rutabaga varieties should be planted as soon as possible after the middle of June, as they need a longer season than the Turnips.

One ounce of seed will sow 100 feet of drill;
one pound will plant an acre

Livingston's Capitol Lawn Seed.

It contains only the highest grade of grasses suitable for the purpose of making a beautiful, durable, lasting lawn. Germinates quickly and roots deeply. This enables it to withstand the intense heat of summer and the hard cold of winter. It contains only those grasses which are lasting and hardy. When a lawn is once established from our seed, it lasts for years. From six to eight weeks' time is all that is required to form a close, thick turf of rich, velvety green. Owing to the high-grade seeds used in our mixtures, one pound is sufficient to sow 300 square feet of new lawn. Lb. 50 cts.; 3 lbs. \$1.30; 5 lbs. \$2; 10 lbs. \$3.75; 25 lbs. \$8.75; 100 lbs. \$33, prepaid.

Shady Place Mixture. On nearly all lawns there are shaded, bare, and unsightly spots on which one has difficulty in getting a stand of grass. For such places this mixture is adapted. It is composed of grasses which naturally grow in shaded places. They are

the finest and most costly of all grasses. If the soil is covered with moss or seems "sour" and out of condition, rake off the surface and apply hydrated lime at the rate of 100 pounds to 1,000 square feet; this will sweeten the soil. Lb. 55 cts.; 3 lbs. \$1.45; 5 lbs. \$2.25; 10 lbs. \$4.25; 25 lbs. \$10; 100 lbs. \$38, prepaid.

Quick Grower Lawn Seed. We prepare a special mixture that will give quicker results than our Capitol Lawn Seed, yet it makes a fair lawn. Where this mixture is used our Capitol Lawn Seed should be used the next year for renovating. Lb. 40 cts.; 3 lbs. \$1; 5 lbs. \$1.50; 10 lbs. \$2.75; 25 lbs. \$6.25; 100 lbs. \$23, prepaid.

White Clover. Excellent for lawns when mixed with other grasses. Does not stand dry, hot weather well, but tends to keep crab grass in check. Lb. 90 cts.; 3 lbs. \$2.40; 5 lbs. \$3.65; 10 lbs. \$6.75, prepaid.
